

Stéphane Muñoz obtained his PhD in 2002 in Montpellier University (France), working on the regulation of nitrate and ammonium transporters expression in *Arabidopsis thaliana* (BPMP lab). He joined the GAFL lab in 2003 and worked on the genetic control of tomato fruit shape and organoleptic quality. He joined the LIPM lab in 2011. He is leading the Sunflower-Pests Interactions group and works on the genetic control and the cellular and molecular mechanisms of sunflower resistance to *O. cumana* and to *P. halstedii*. He is coordinating the International Consortium on Sunflower Genomics.
